

# Garrison Vinyl Moisture Barrier

*10mil Moisture Barrier Plastic Film*

Materials: Polyethylene

Thickness supplied: 10mil (0.25mm)

Dimensions: rolls of 4ft (W) × 127ft (L)

Weights: 25.6 lbs/roll

Total surface area: 500SF/roll

With self-adhesive strip

**100%**  
VAPOUR  
BARRIER

**100%**  
ELECTRIC  
INSULATION

**100%**  
MOLD AND  
MILDEW  
RESISTANT

**100%**  
ECO FRIENDLY

**10mil Moisture Barrier Plastic Film** is a low density Polyethylene film that can be used during the installation process with all floating floors. No need to bother with large fold-out, low quality, off-spec, construction grade films, which are bothersome and hard to use before the floor is installed.

**10mil Moisture Barrier Plastic Film** is also recommended for use with pre-attached floating wood floors in which the padding is attached to the floor during the manufacturing process. While installing a pre-attached padded floor, it is recommended to also install a moisture resistant film over concrete or any substraat where moisture is a concern.

- » Made with 100% polyethylene for long-lasting moisture protection
- » Designed for use over most types of subfloors
- » Helps protect wood or laminate floor from harmful subsurface moisture
- » Roll the film out and tape all seams for easy installation
